

y-Mirroring --> don't works for rotated netclass labels and additional custom fields

- select the schematic block below
- observe position of additional fields "netclass_01" and "user value field"
- "Y" for vertical mirroring
- observe result and position of mentioned fields

additional note for myself after bugfix:

- check behaviour of mirroring multiselected field-strings:
- select "local_label" (only the string)
- + select "netclass_01" label (only the string)
- hit "X" multiple times --> do the strings stay at their position or do they moving around??
